

Victor's Story

24 years old

Our son, who is now 24 years old, showed no signs or trace of any type of disorder in the initial years. In fact until he was five, he was perfectly normal like any other child of that age group, getting good grades in school etc.

Around the age of 5 though, we started to see that something was not right with our son. He was diagnosed as an ASD/ADD child. From that age on, until today, we have been through various doctors trying out different types of medication.

To be fair to all these doctors, some of the approaches, i.e. acupuncture, NAET, bio-feedback, etc., helped our son in varying degrees but it was difficult to conclude that the improvement was significant or substantial.

We started on the methyl-B12 regimen about 8 to 10 months back and Victor did well with this. Then we followed that course by introducing HBOT about 4 months back. This combination, along with the supplements Dr. Neubrandner prescribed, has brought about undeniable changes. These changes have been so obvious that we think the day will come in the not-so-distant-future when our son's diagnosis will be re-

verted forever and he will be an independent person.

Twenty years ago when my son was first diagnosed, my wife lost her smile and for the first time in 20 years, she once again has a smile on her face! And my younger son says that the progress he has seen with his brother in the last few months since starting HBOT has been the most profound ever.

Some of the undeniable changes have been:

"These changes have been so obvious that we think the day will come in the not-so-distant-future when our son's diagnosis will be reverted forever and he will be an independent person"

- Very cheerful all through the day.
- Staying in the family room and watching TV and interacting with family members like a very normal person.
- Very responsive, alert and very friendly.
- Impeccable behavior.
- More connected.
- More normal speech patterns.
- Better eye contact

that is sustained for longer periods of time.

We want to continue with methyl-B12 plus HBOT for some more time and are hoping that we will 'get back' our son soon.

'Thanks' to you from the Parents

Doctor's Note: In the world of autism, it is a common but erroneous belief that older children cannot do well from biomedical treatments. Therefore many parents of older children stop trying and just give up. However, Victor's story is just one of many demonstrating that at least two treatments - methyl-B12 and HBOT - definitely can make a significant difference and that it is never too late to try.

Laugh Attack!
