

FOUR CORE BODY SYSTEMS FOR WELLNESS

The four core systems that are critical to maintaining health are:

1. Detoxification System
2. Gastrointestinal System
3. Hormonal/Endocrine System
4. Immune System

Why These Four?

Whether you are very ill, seeking to prevent illness, or just trying to improve your overall health or fitness levels, it is important to evaluate these four systems. How these systems function both independently and interdependently has a profound influence on your health. If one or more is compromised, the negative effects spill over to all other systems, creating a chain of events that can greatly impact your overall health.

If you are serious about preventing health problems or creating an environment where the body can heal, you are cheating yourself out of success if you do not focus on these systems. (1)
